Other Site Characteristics

Ambiente palustre d'acqua dolce originatosi all'interno delle casse di espansione per le piene dei torrenti Idice, Sillaro, del fiume Reno e di alcuni canali della bonifica. Le tre casse principali presentano caratteristiche differenti: acque libere e profonde nel Bassarone, lamineti bordati da canneti in Valle Campotto, canneti e tifeti in Valle Santa. Fra Valle Santa e Valle Campotto si trova il bosco igrofilo planiziale del Traversante. Sono inclusi nel sito ampi tratti dei corsi d'acqua che fiancheggiano le casse di espansione, con annessi boschi ripariali.
