

SubCoast

Building services for monitoring hazards from ground subsidence in coastal lowlands

SubCoast Project

FP7 project to demonstrate GMES downstream (satellite) services for monitoring and forecasting subsidence hazards in coastal areas in the EU

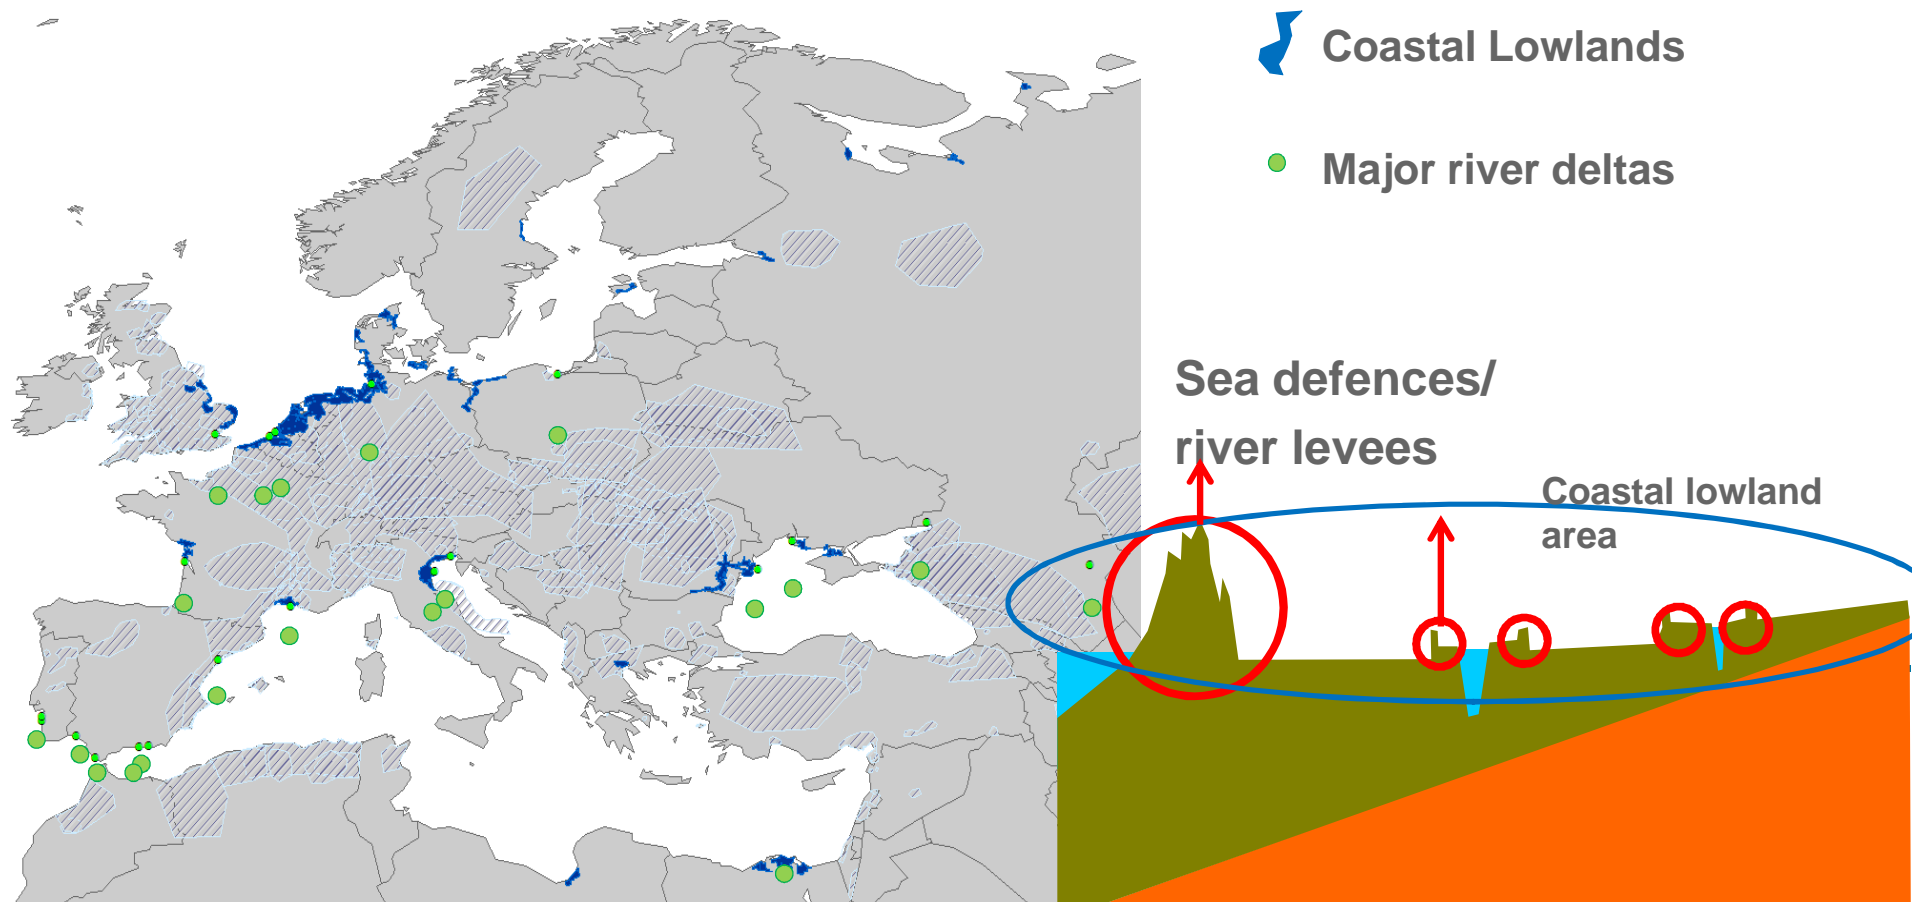

- Project 4.1 MEUR
- Start: April 2010
- End: November 2013
- 12 partners, 7 countries
 - 5 geological surveys
 - 3 commercial data processors
 - 3 geomatic research institutes
 - 1 value adder

SubCoast: Scope

- Coastal Lowlands prone to flooding *and* subsidence
- Flood defences in coastal lowlands prone to subsidence

Causes of subsidence in coastal lowland areas

Compaction
Oxidation
ground water
extraction, etc.

'Deep' instability
Mining, oil, gas
extraction, etc.

Hansje Brinker Dijkmonitoring

TU Delft

INSTITUT DE GEOMÀTICA

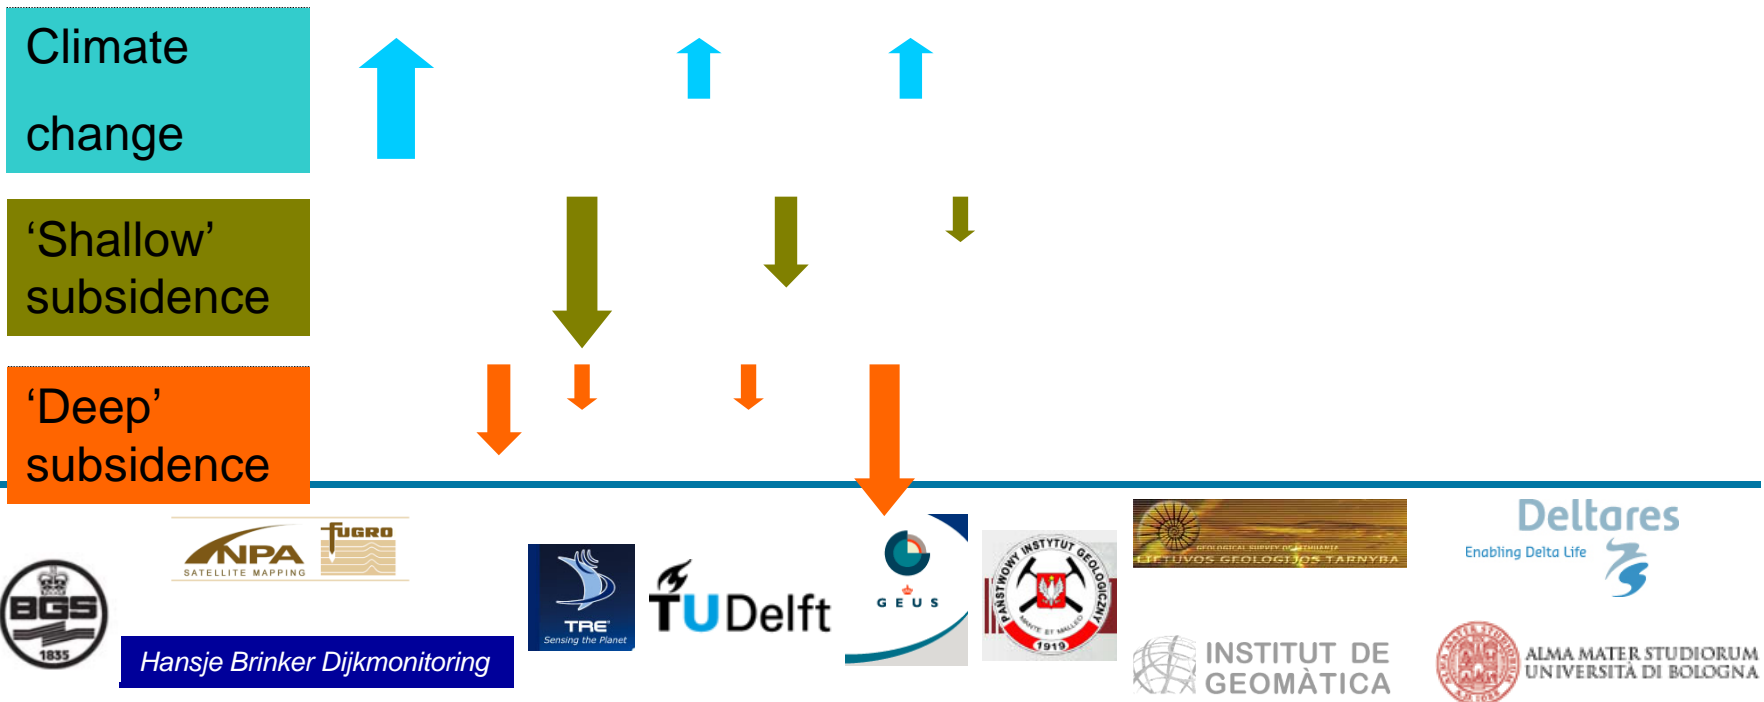

ALMA MATER STUDIORUM UNIVERSITÀ DI BOLOGNA

Coastal Lowland Subsidence and Flood Defence

Increasing Flood Risk through combination of:

- Sea level rise (Climate Change)
- Ground subsidence
- (in-)Stability of flood defences

In terms of INSPIRE:

Risk zone:

Coincidence (natural) hazard and (vulnerable) exposed elements

Hansje Brinker Dijkmonitoring

ALMA MATER STUDIORUM
UNIVERSITÀ DI BOLOGNA

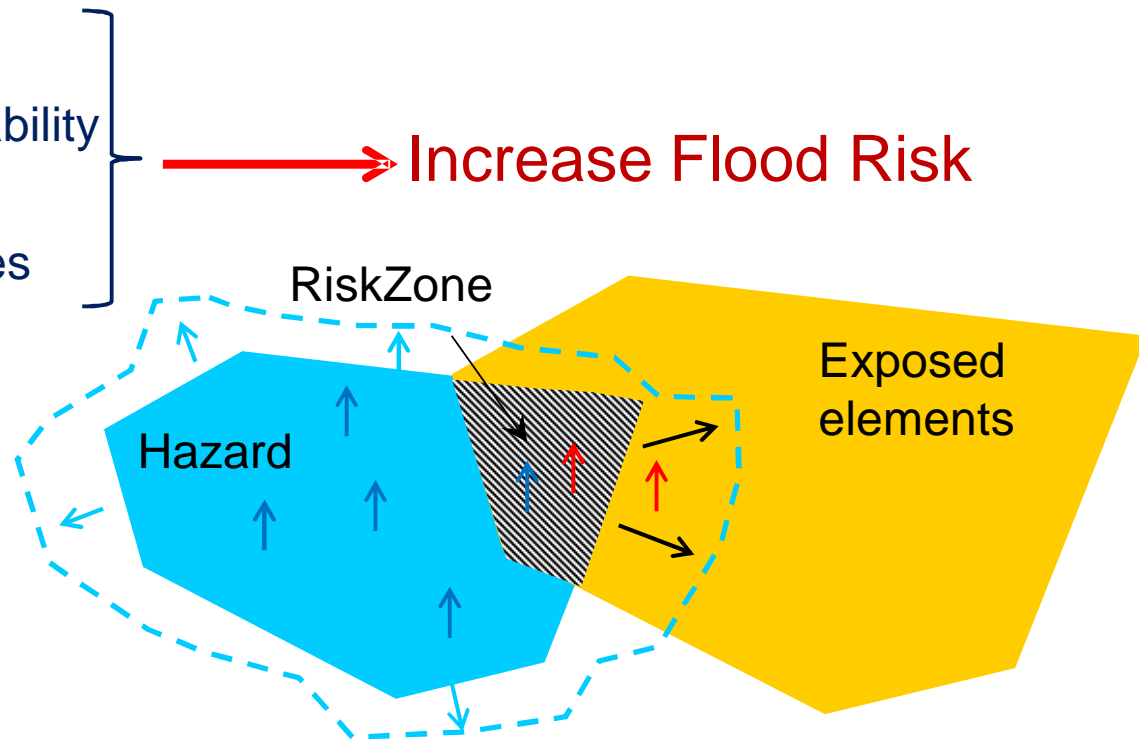

Subsidence (+ SLR)

causes:

- ↑ • Increase of hazard area
- ↑ • Increase of hazard probability
- ↑ • Increase of risk zone
- ↑ • Increase of consequences

→ Increase Flood Risk

Hansje Brinker Dijkmonitoring

ALMA MATER STUDIORUM
UNIVERSITÀ DI BOLOGNA

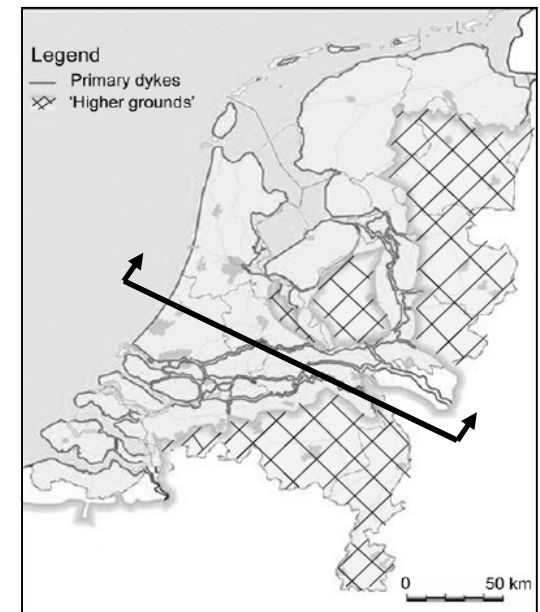

Role of EO techniques:

(PSI, combined with leveling, GPS, geological data,...)

- Area wide subsidence monitoring
- Monitoring flood defences
- Validation of geo-hydrological subsidence models
- Etc.

(Example: The Netherlands)

SATELLITE MAPPING

Hansje Brinker Dijkmonitoring

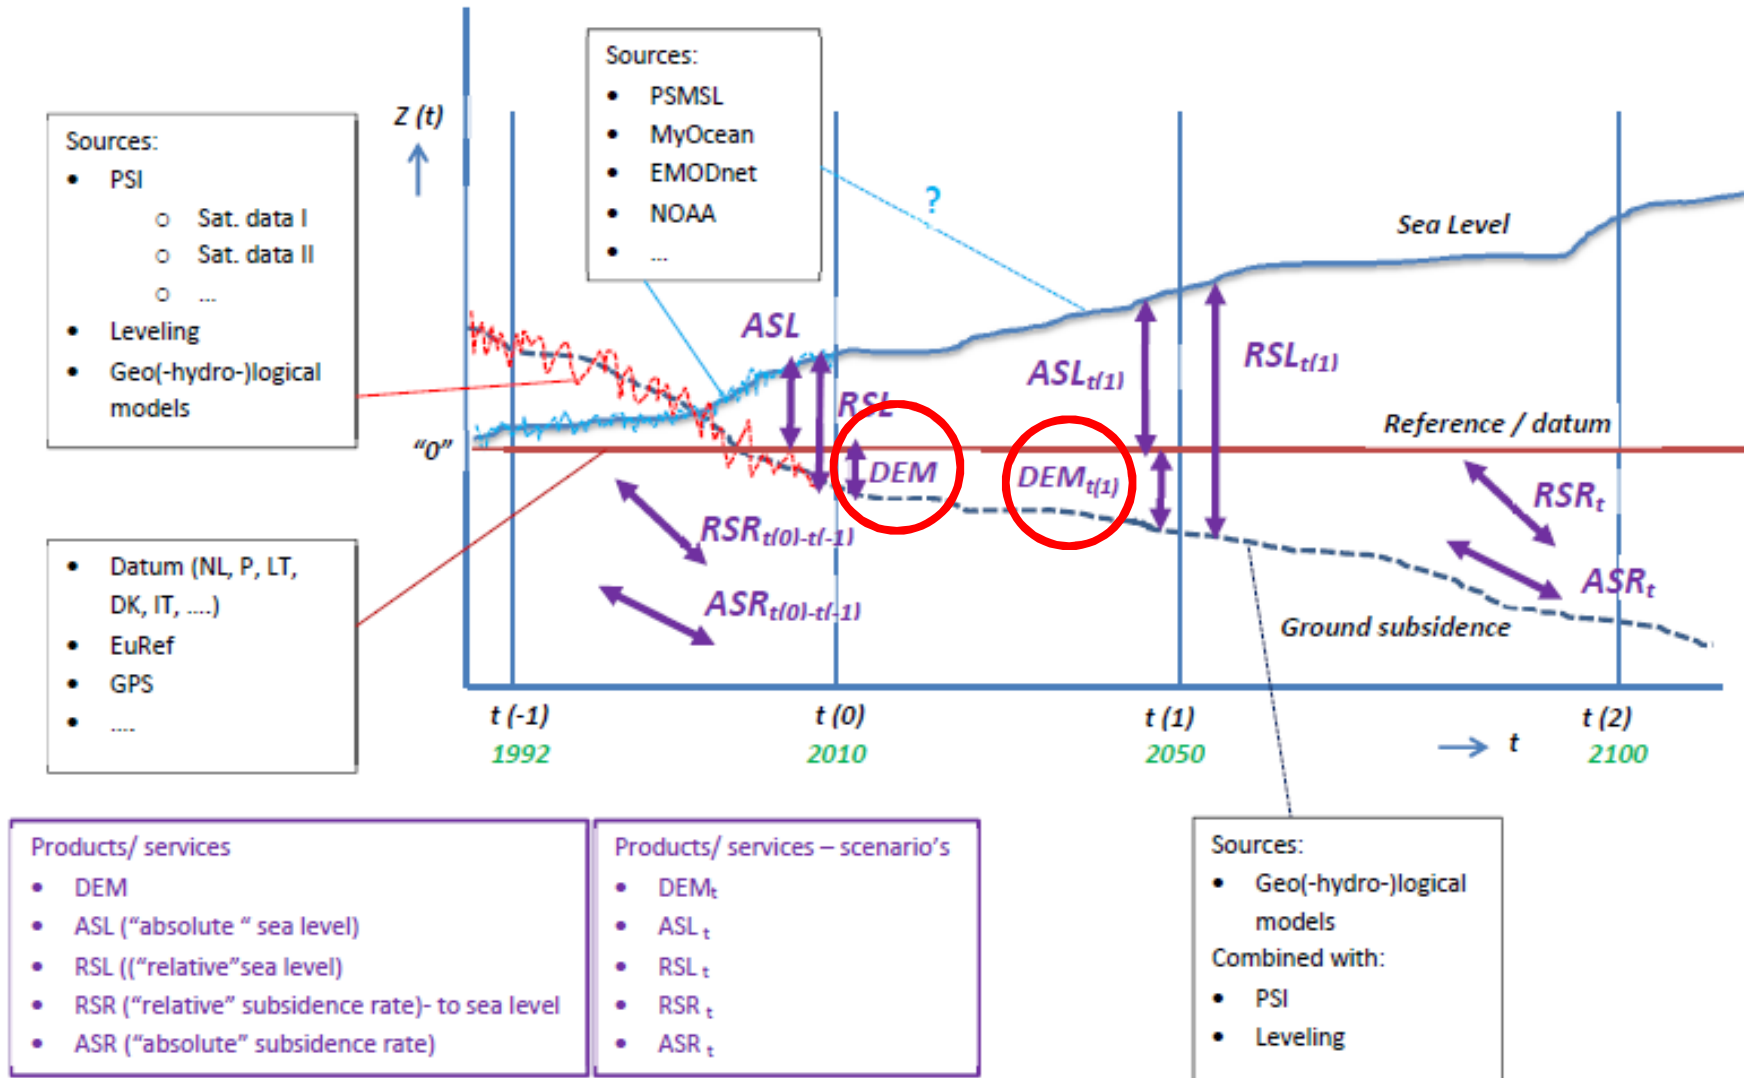

Can PSI help?

SubCoast Services

Subcoast Services

“Core” Service: → *other services can be derived*

“Delta-DEM” or “•-DEM”:

Elevation as a function of time,

at high precision and high resolution scale

(DEM= Digital Elevation Maps)

Including:

- Ground motion/ subsidence forecasts
- Connection to geodetic reference systems

Subcoast services

Potential applications and users:

Applications (TerraFirma, SubCoast)

Flood plain PSI wide area maps
Flood plain local subsidence maps
Flood defence monitoring product
Advanced subsidence modelling products
Relative sea level rise maps
+ subsidence forecasts
....

Potential Users

Diverse departments from local and regional authorities
Water boards
Diverse national governmental departments
European Agencies and DG's
Research institutes
....

→ **Poster Presentation**
Univ. Bologna; Deltares

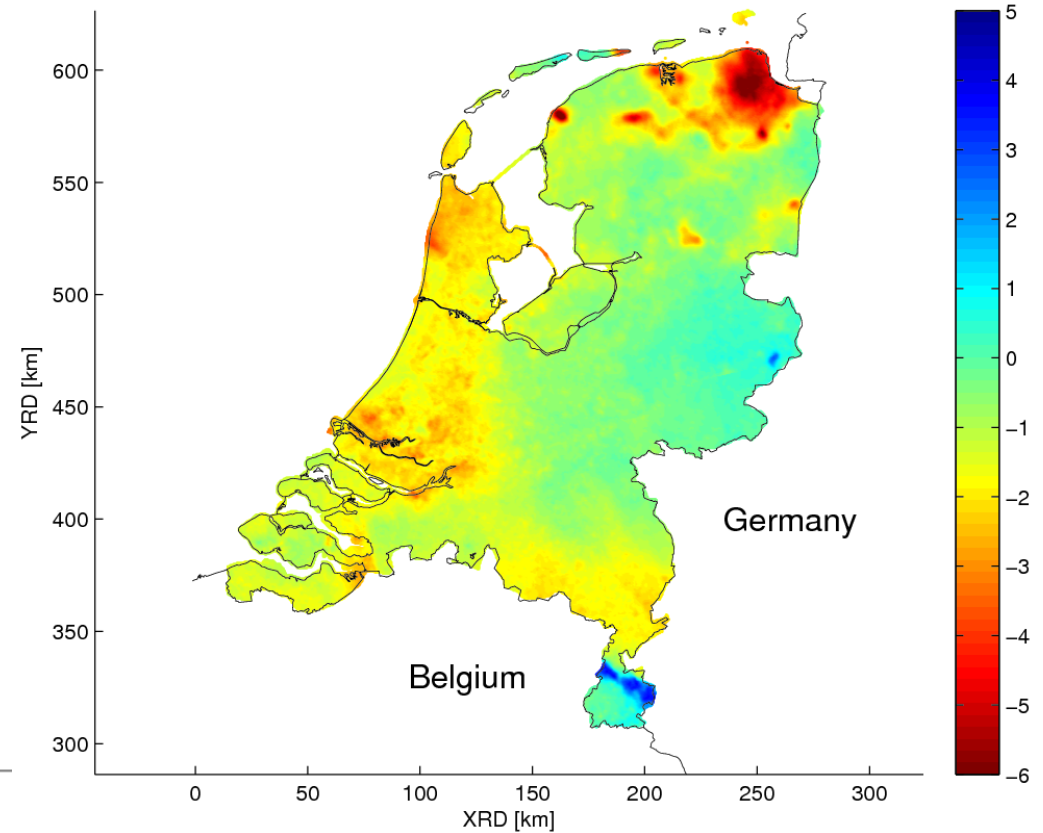

- *EO-applications are in many cases intermediate products within workflows of end users*
- *Valid applications need knowledge of objectives and workflows of users*

Example: Nation wide subsidence map of the Netherlands

Average vertical displacement rates [mm/yr] at deep layers (1992 – 2010)

Average vertical displacement rates [mm/yr] (1992 – 2010)

Include services in webportals:

Dedicated and generic (e.g. EGDI)

The screenshot displays a web browser window with the following elements:

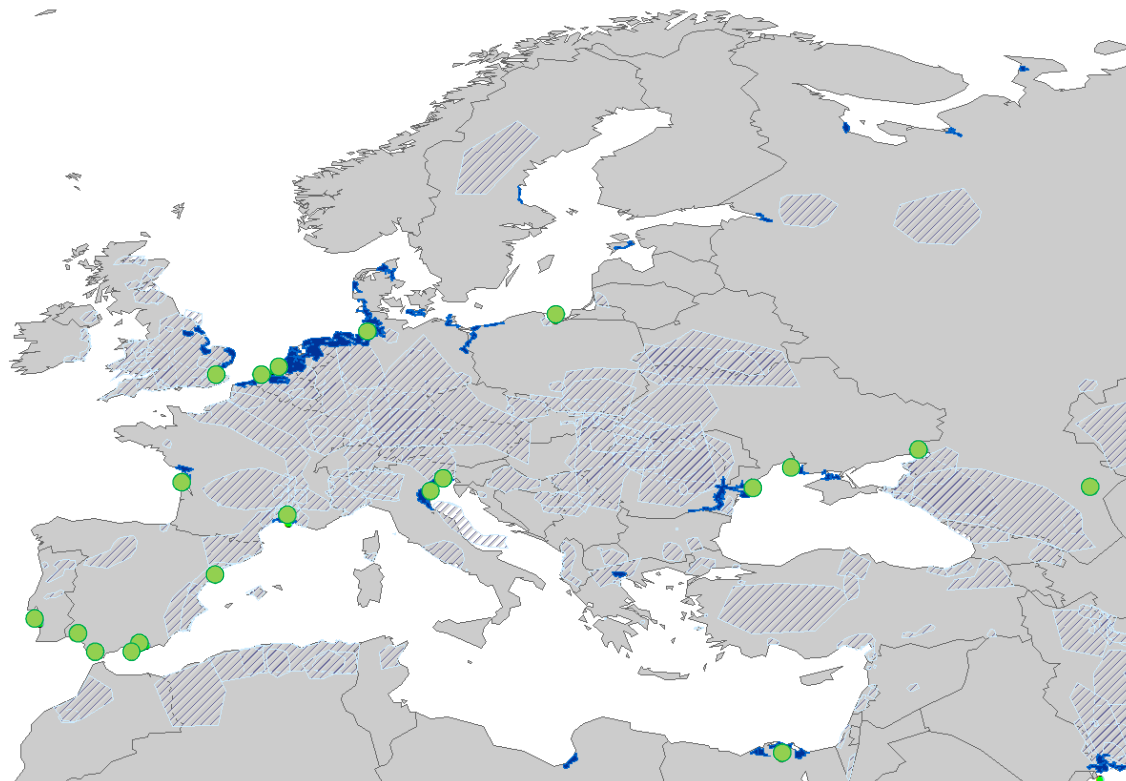

- Browser Header:** Mozilla Firefox, URL: localhost:8080/geonetwork/srv/en/user.login, Time: 15:43:17, User: geolofar.
- Page Header:** GeoNetwork - The portal to spatial data and information. Navigation links: Home | Administration | Contact us | Links | About | Help | Language: English. User: admin admin | Logout.
- Logo:** SUBCOAST - Mapping and monitoring subsidence hazards in coastal lowland areas around Europe.
- Left Panel:**
 - WHAT?** Search input field.
 - WHERE?** Map navigation icons (pan, zoom, home, etc.).
 - Dropdown menu: - Any -
 - Buttons: Search, Reset, Advanced, Options.
 - Navigation menu:
 - Applications
 - Audio/Video
 - Case studies, best practices
 - Conference proceedings
 - Datasets
 - Directories
 - Interactive resources
 - Maps & graphics
 - Other information resources
 - Photo
 - GeoRSS feed: bx-t-c, DGM 1.3 - 02-Formatie van Boxtel.
- Map Viewer:**
 - Map viewer title bar: WGS84 (lat/lon).
 - Layer tree:
 - Base Layer: Ortophoto
 - Overlays:
 - NaturalRisks Nederland (checked)
 - 1GE TNO 1M surface Geology (checked)
 - DNK GEUS 1:1 M Geology (checked)
 - GBR BGS 1:50k Bedrock (unchecked)
 - geologische overzichtskaart (checked)
 - BX - Top in m. NAP (unchecked)
 - Countries (checked)
 - Borders (unchecked)
 - Buttons: Print, Legend.
 - Legend:
 - NaturalRisks Nederland
 - 1GE TNO 1M surface Geologic Unit
 - DNK GEUS 1:1 M Geology
 - Aeolian sand, inc (yellow)
 - Keywords: Geologie, Dieptekaart, Diktekaart, Diktekaart, DGM, Formatie.
- Map:** A map of a coastal region with various overlays. An **Opacity** dialog box is open over the map. A scale bar shows 100 km / 50 mi and a zoom level of 1:4359747.

Proceeding / Sustainability

Determine areas of interest/ potential risk zones:

- Coastal lowland areas: flood plains & flood defences
- Flood prone areas/ plains along rivers

- 📍 Coastal Lowlands
- Major river deltas
- ▨ *Flood prone river areas*

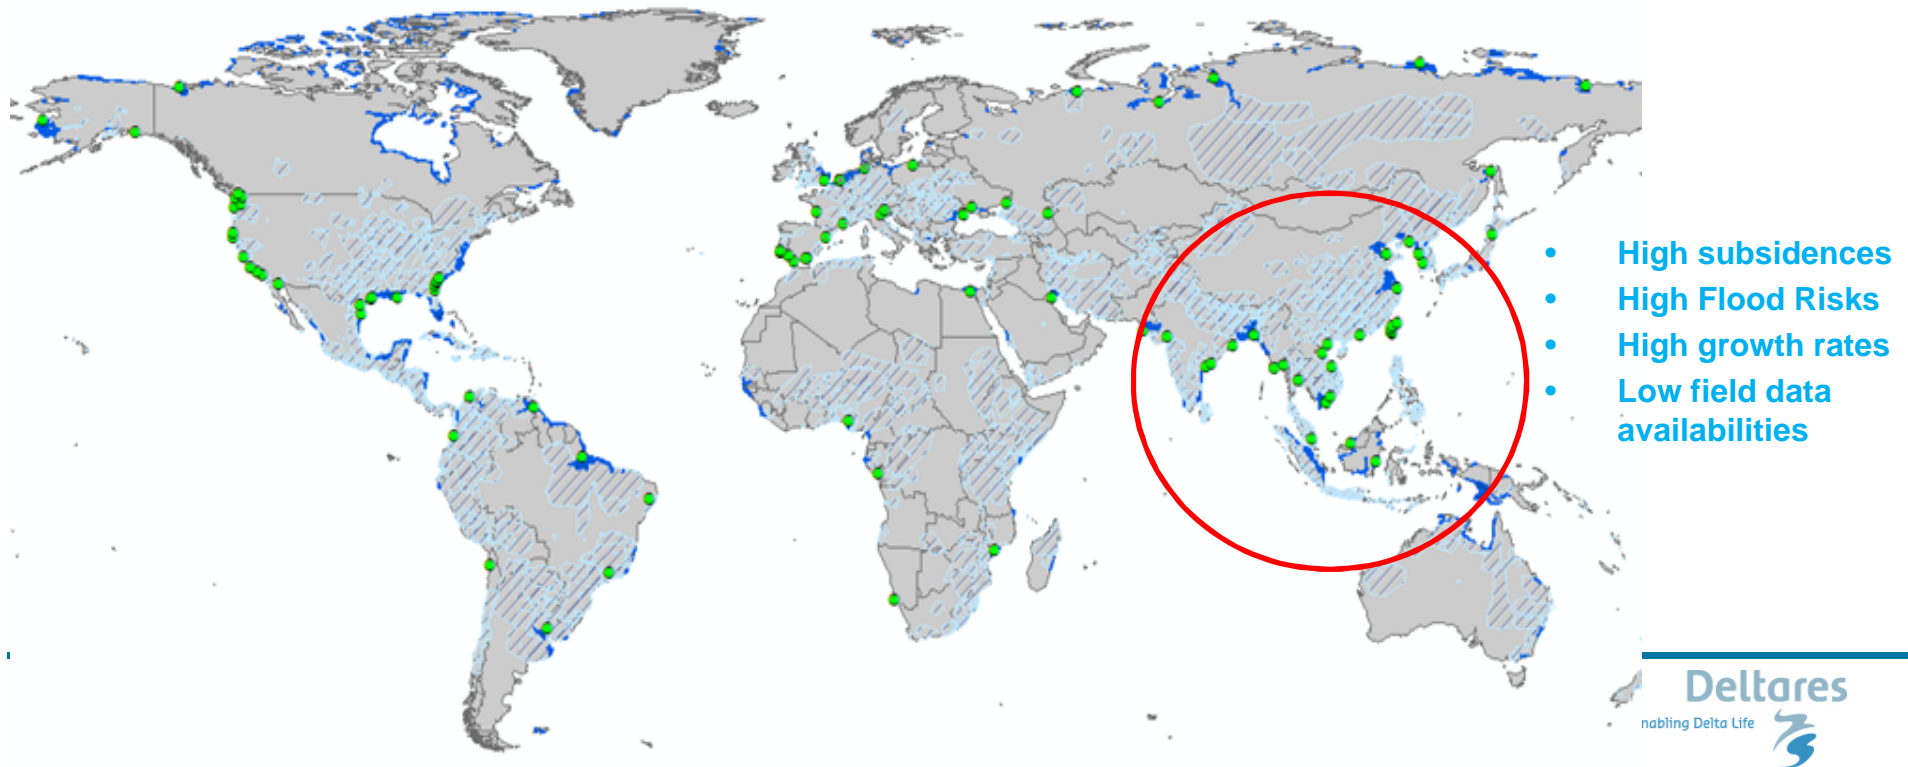

Proceeding / Sustainability

Determine areas of interest/ potential risk zones worldwide:

- Europe 'pilot area'; real interest for SE-Asia and other areas?

Proceeding / Sustainability

- Subsidence mapping in every potential risk area where PSI available
- Add inland river plain pilots
- Select real areas of interest
- Incorporate EO-services in users workflows

Long term perspective:

Automated sufficient resolution/ sufficient frequency subsidence monitoring;
public portals with data, model and map services, worldwide
