Other Site Characteristics

Area caratterizzata dalla presenza di due affioramenti ofiolitici, calanchi su argille scagliose e zone umide. L'habitat 6210 è da considerarsi prioritario.

4.2 Quality and importance

Specie animali: Chalcides chalcides, entità olomediterranea, in regione legata ad ambienti costieri e del Contrafforte Pliocenico che presentano caratteristiche bioclimatiche e vegetazionali di tipo mediterraneo. Scarse conoscenze sulle distribuzione ed ecologia di popolazione. Distribuzione frammentaria. Catocala fraxini, sebbene diffusa su un ampio areale la specie non è frequente anche perchè molto ricercata dai collezionisti. Si sviluppa su Pioppi, oltre che su Frassino e altre latifoglie, ma in Italia sembra mal tollerare le estese e profonde trasformazioni agricoli della pianura ed ha pertanto popolazioni molto localizzate, generalmente nell'orizzonte sub-montano.
