Other Site Characteristics

Poco a valle delle Vene del Tevere, al di là del ripiano coltivato di Falera e Montecoronaro, si estende l'unico versante tirrenico dell'Appennino romagnolo tra le selve e i dirupati versanti pseudocalanchivi delle Marne di Verghereto, proteso verso la provincia di Arezzo. Il neonato Tevere, prima di incunarsi tra le selvagge "Alpi" di Serra e della Luna, incide le plaghe argillose del Castel di Colorio tra la Teveriola e il Poggio Castagnolo, ammantate di boschi di cerro tra i più belli in regione e a tratti denudate tra pittoresche formazioni calanchive. Le difficili condizioni edafiche relegano la faggeta nel settore meridionale alle quote più alte, dove ricompaiono substrati arenacei.

4.2 Quality and importance

L'ambiente forestale e poco disturbato ospita stabilmente il Lupo, diversi rettili, tra i quali anche la Luscengola, presente a quote tra le più elevate per lei in regione, e numerose specie di uccelli. E' presente una singolare flora montana con specie tirreniche a influsso mediterraneo, in quello che può essere considerato il primo sito forestale esterno alle Foreste Casentinesi, molto vicino ma sostanzialmente già molto distante per quanto riguarda gli ambienti.
